

Environmental Commitment of the Service Provider (Supplier) to TYP SA

ENVIRONMENTAL COMMITMENT OF THE SERVICE PROVIDER (SUPPLIER) TO TYP SA

The TYP SA Group (hereinafter TYP SA) has implemented a certified Environmental Management System with registration number GA-2010/0617.

In order to protect the environment, TYP SA requires service providers to faithfully follow the environmental guidelines promoted by the aforementioned Environmental Management System whenever they operate in its facilities. To this end, the SUPPLIER commits to comply with the environmental legislation applicable at all times, depending on the specific activities carried out within the TYP SA Group's facilities, and to follow good environmental practices in accordance with the TYP SA Group's Environmental Management System, as indicated below:

1. WASTE MANAGEMENT

With regard to the waste produced during the development of its activity, the SUPPLIER's employees must take special care of urban waste management and disposal (paper, plastic, glass, cans, organic waste, etc.); the remains of oil and grease; and hazardous waste (aerosols, packaging that has contained hazardous products, batteries, energy-saving light bulbs, etc.).

■ **Waste considered as urban waste** shall be disposed according to the following guidelines:

- **Paper and cardboard** shall be disposed of in the blue waste bins of the workers, in the paper containers and in the cardboard cages placed for this purpose in the building.
- **All other waste** is to be disposed of in the general waste bins. In this respect, special care must be taken not to dispose of any hazardous waste such as aerosols, cleaning product containers, lubricating oils, oil-soaked rags, etc., or any containers that have contained them, in these general waste bins.

■ **Hazardous waste** must be removed by the SUPPLIER, who will ensure that it is suitably treated in accordance with current legislation on this type of waste. **Under no circumstances will this waste be left at TYP SA Group's facilities, and the SUPPLIER will be responsible for its appropriate external management.**

2. RESOURCE MANAGEMENT

With regard to the management of resources, such as water, energy, paper, etc., the SUPPLIER undertakes to make rational use of these, using efficient work processes and practices to minimise consumption.

3. ACTIONS

Without prejudice to the foregoing, it is expected that during the performance of their work, the SUPPLIER's workers will avoid, as far as possible, producing excessive noise, emissions and annoying odours. It is also expected that, once the work has been completed, the SUPPLIER's employees will contribute to maintaining the places where they have worked in suitable conditions of cleanliness and order.

In the event of any doubts regarding the guidelines indicated in this document, the SUPPLIER's personnel shall consult with their usual TYP SA contact person. Whenever any type of emergency occurs, TYP SA personnel shall be immediately informed and shall determine the actions to be taken.

The SUPPLIER also undertakes to communicate the environmental guidelines contained in this document to all its personnel involved in the work carried out for TYP SA.
